

Powerpivot Fundamentals

Course Overview

This PowerPivot group class concentrates on how to create powerful pivot tables through multiple table relationships. By the end of the Excel PowerPivot training course, you will feel confident setting up relationships, creating and displaying complex PivotTables and using Calculated DAX columns. This class is perfect for those that have a fundamental understanding of Excel and using Excel Pivot tables and want to see more correlation between data. Those in the financial, real-estate or data analysis field will especially find this class enjoyable.
